Here are the questions from [2.4 Bayesian decision theory - Quiz]

1. I changed the loss function but forgot to update my notes! The expected loss of taking the course is 13.5 (and not 10.5). This does not effect the conclusions of the example.
Optional Answers:

2. Using Bayesian decision theory we can make informed decision regarding whether to attend a course by just looking at the posterior distribution over the quality of the course.
Optional Answers:
1. true
2. false

Thank You
